

Taskify SaaS Update Points for v1.0.3

New Features and Improvements

1. Priority and Status Enhancements

- Added priority for projects/tasks.
- Simplified project/task status changes with an optional note feature.
- Implemented a quick view for projects/tasks displaying descriptions on hover.
- Optimized project and task information pages using tab views.

2. User Experience and Interface

- Modal-based creation and updating of projects/tasks to avoid page redirects.
- Edit button for projects/tasks with user/client listings.
- Added customizable notifications for project/task updates and leave requests via email, SMS, and system notifications.
- Enabled rich text descriptions for projects, tasks, milestones, notes, and to-dos.

3. Task and Project Management

- Allowed task accessibility settings during project creation/updating.
- Pre-selected user creating the task.
- Created status, priority, and tags without page reloads.
- Added scrollable project/task statistics and Todos.

4. Leave Management

- Added "From" and "To" time for partial leave requests.
- Calendar view for birthdays, work anniversaries, and members on leave.
- Leave request visibility options.
- Updated details of leave requests beyond status.

5. Notifications and Communication

- Added WhatsApp notifications.
- Enabled chat icon for floating chat access.
- Preferences for enabling/disabling various notification types.
- Team Member on Leave Alert notifications.

6. UI Improvements and Bug Fixes

- Improved Todos order and task info page using tab views.
- Added serial numbers and descriptions in invoice/estimate PDFs.
- Various UI improvements and bug fixes across the platform.

7. Miscellaneous Enhancements

- Added project and task discussion features.
- Signup option with admin control.
- Created client profiles for internal use.
- Added filters in users and clients tables.
- Added media-related activity logs and clickable assigned badges.
- Updated documentation with key considerations for installation and auto-updater.
